

Lesson 2 – Case Study: The 1918 Influenza Pandemic – Factors Beyond the Biological that Influence the Spread of Disease

LESSON QUESTIONS

- How does influenza virus change to cause a pandemic?
- How do social and political factors affect the spread of disease?

LESSON OBJECTIVES

- Recognize that the impact of influenza virus depends in part on how the virus mutates.
- Discuss social and political factors that affected the spread of influenza in 1918.

OVERVIEW

Students learn the different ways that influenza virus can mutate and what impact that has on how rapidly and widely the virus spreads. The class develops a hypothesis regarding the impact of World War I on the spread of influenza. Student groups research topics related to the 1918 influenza pandemic and present their findings to the class for a discussion and assess whether the findings support or reject the class hypothesis. Students then explore the topics in more detail in a writing exercise using the RAFT writing technique.

LENGTH

Up to two 45-minute sessions

GLOSSARY TERMS

antigenic drift, antigenic shift, epidemic, genotypes, hemagglutinin, neuraminidase, pandemic, 1918 influenza pandemic

STANDARDS

Next Generation Science Standards

- Disciplinary Core Ideas in Life Sciences

- All cells contain genetic information in the form of DNA molecules. Genes are regions in the DNA that contain the instructions that code for the formation of proteins.
- Science and Engineering Practices
 - Asking Questions and Defining Problems
 - Ask questions that arise from examining models or a theory, to clarify and/or seek additional information and relationships.
 - Ask questions to determine relationships, including quantitative relationships, between independent and dependent variables.
 - Planning and Carrying Out Investigations
 - Plan an investigation or test a design individually and collaboratively to produce data to serve as the basis for evidence as part of building and revising models, supporting explanations for phenomena, or testing solutions to problems. Consider possible variables or effects and evaluate the confounding investigation's design to ensure variables are controlled.
 - Constructing Explanations and Designing Solutions
 - Apply scientific reasoning, theory, and/or models to link evidence to the claims to assess the extent to which the reasoning and data support the explanation or conclusion.
 - Obtaining, Evaluating, and Communicating Information
 - Critically read scientific literature adapted for classroom use to determine the central ideas or conclusions and/or to obtain scientific and/or technical information to summarize complex evidence, concepts, processes, or information presented in a text by paraphrasing them in simpler but still accurate terms.
 - Gather, read, and evaluate scientific and/or technical information from multiple authoritative sources, assessing the evidence and usefulness of each source.
- Crosscutting Concepts
 - Cause and Effect: Events have causes, sometimes simple, sometimes multifaceted. Deciphering causal relationships, and the mechanisms by which they are mediated, is a major activity of science and engineering.

- Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.
- Scale, Proportion, and Quantity: In considering phenomena, it is critical to recognize what is relevant at different size, time, and energy scales, and to recognize proportional relationships between different quantities as scales change.
 - The significance of a phenomenon is dependent on the scale, proportion, and quantity at which it occurs.
- Stability and Change
 - Change and rates of change can be quantified and modeled over very short or very long periods of time. Some system changes are irreversible.
- Connections to the Nature of Science
 - Scientific Investigations Use a Variety of Methods
 - Science Knowledge is Based on Empirical Evidence
 - Scientific Knowledge is Open to Revision in Light of New Evidence
 - Science Models, Laws, Mechanisms, and Theories Explain Natural Phenomena

Common Core State Standards

- CCSS.ELA-LITERACY.RST.9-10.1
Cite specific textual evidence to support analysis of science and technical texts, attending to the precise details of explanations or descriptions.
- CCSS.ELA-LITERACY.RST.11-12.1
Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.
- CCSS.ELA-LITERACY.RST.9-10.5
Analyze the structure of the relationships among concepts in a text, including relationships among key terms (e.g., force, friction, reaction force, energy).

- CCSS.ELA-LITERACY.RST.11-12.5
Analyze how the text structures information or ideas into categories or hierarchies, demonstrating understanding of the information or ideas.
- CCSS.ELA-LITERACY.RST.9-10.9
Compare and contrast findings presented in a text to those from other sources (including their own experiments), noting when the findings support or contradict previous explanations or accounts.
- CCSS.ELA-LITERACY.RST.11-12.9
Synthesize information from a range of sources (e.g., texts, experiments, simulations) into a coherent understanding of a process, phenomenon, or concept, resolving conflicting information when possible.
- CCSS.ELA-LITERACY.W.9-10.3; CCSS.ELA-LITERACY.W.11-12.3
Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.
- CCSS.ELA-LITERACY.W.9-10.9; CCSS.ELA-LITERACY.W.11-12.9
Draw evidence from literary or informational texts to support analysis, reflection, and research.
- CCSS.ELA-LITERACY.SL.9-10.1
Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 9-10 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.
- CCSS.ELA-LITERACY.SL.11-12.1
Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 11-12 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.
- CCRA.R.1
Read closely to determine what the text says explicitly and to make logical inferences from it; cite specific textual evidence when writing or speaking to support conclusions drawn from the text.
- WHST.11-12.7 Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize

multiple sources on the subject, demonstrating understanding of the subject under investigation.

- WHST.11-12.2.B Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
- CCRA.SL.4
Present information, findings, and supporting evidence such that listeners can follow the line of reasoning and the organization, development, and style are appropriate to task, purpose, and audience.

MATERIALS

- Student worksheet
- Computer with internet access

BACKGROUND FOR TEACHER

Influenza viruses are capable of dramatic changes to the viral genome, called antigenic shift. When a dramatically different strain forms, it creates a high level of susceptibility among the world's population. Because virtually no one is immune to this new strain of influenza, it has vast opportunities to spread and under the right conditions, can lead to a pandemic. The words influenza pandemic to ever occur happened in 1918. While the biological nature of the virus set the stage for the pandemic, this lesson gets students thinking about the state of scientific understanding at the time as well as the political role that world affairs, such as WWI, may have played in this historic event.

TEACHER NOTES

Students should have a general understanding that influenza differs from other vaccine-preventable diseases in that people need a yearly vaccine in order to have protection against the virus because the virus undergoes regular small mutations. They should also grasp that when conditions are suitable the virus can change dramatically to cause widespread illness called a pandemic. They should be aware that the worst pandemic occurred in 1918. You may also wish to review how influenza spreads from person to person, specifically, that infection spreads through exposure to respiratory secretions of those who are infected, such as by coughing, sneezing or touching surfaces that have those secretions and then touching one's eyes, nose, or mouth.

LESSON RESOURCES

- Lesson animation:
 - *Antigenic Drift: How the Influenza Virus Adapts*

 - *Going Viral: The Mother of all Pandemics* Podcast:
<http://goingviralthepod.libsyn.com>
 - *The Great Influenza: The Story of the Deadliest Pandemic in History* book by John M. Barry:
https://www.goodreads.com/book/show/29036.The_Great_Influenza
 - RAFT writing strategy <http://www.readwritethink.org/professional-development/strategy-guides/using-raft-writing-strategy-30625.html>
 - For Extension activity:
 - Morbidity and Mortality Weekly Report (MMWR), Centers for Disease Control and Prevention,
<https://www.cdc.gov/mmwr/index2018.html>*
- *Note, to access the MMWR for subsequent years, replace 2018 in the URL with the current year, or visit the VMP website to access the most recent teacher lesson plan.

ENGAGE

1. Ask students what they know about how influenza (flu) spreads.
2. Ask students what they know about the difference between an influenza epidemic and an influenza pandemic.
3. Show the animation, *Antigenic Drift: How the Influenza Virus Adapts*
4. After the animation, point out that the virus spreads in the same way, but that during a pandemic because of biological (genetic) changes, virtually everyone is susceptible.
5. Introduce the 1918 influenza pandemic as the worst pandemic in history.
6. Ask students what else was going on in the world in 1918. Once World War I (WWI) has been identified, ask students if they think that the war may have had an effect on the transmission of the virus.

7. Work as a class to create an hypothesis related to the war and its effects on the pandemic. Explain that as a class, you are going to do research to test the hypothesis.
Sample hypotheses:
 - WWI contributed to the spread of flu virus during the 1918 pandemic.
 - WWI did not contribute to the spread of flu virus during the 1918 pandemic.
8. Have students complete the vocabulary table on page 1 of the student worksheet.

EXPLORE

1. Have students read the passage about the 1918 pandemic and answer the questions on page 2 of the student worksheet.
2. Divide the class in to groups so that there are 9 groups.
3. Assign one of the following topics to each group or put each of the following on a slip of paper and have groups each choose one slip:
 - a. Origin of nickname “Spanish flu”
 - b. Sedition Act as it related to WWI
 - c. Importance of Haskell County, Kansas to 1918 pandemic
 - d. Experience at Camp Devens during Fall 1918
 - e. Role of media in 1918 pandemic
 - f. Liberty Loan Campaign during WWI, particularly Liberty Loan Parade in Philadelphia
 - g. U.S. Public Health Service during 1918 pandemic
 - h. When influenza virus was discovered and what was known about it in 1918
 - i. Symptoms of 1918 pandemic, who was getting ill and what illness was like
4. Have groups research their topic and prepare a brief class presentation to share their findings with the class.

EXPLAIN

1. Have all groups share their presentations with the class.
2. After each presentation, have a short class discussion related to whether the presentation provides support for or against the class hypothesis.
3. Add information on a board that the class can see or have students record information in their notebooks.
4. After all presentations, have students discuss whether the findings support or reject the class hypothesis related to the relationship between WWI and the 1918 pandemic.

ELABORATE

Have each student use the RAFT writing strategy to develop an idea from the class discussion.

EVALUATE

Evaluate student understanding based on their RAFT assignment, small group presentations, and class discussions.

EXTENSION

Have students compare and contrast the role of political and social influences on the spread of disease in 1918 and now. Students can be encouraged to search for examples of reports of disease transmission in the media, public health publications (e.g., Morbidity and Mortality Weekly Reports [MMWR]), or by reviewing important historical events for mentions of infectious diseases.

Formats for this activity can be a class discussion, preparation of a written report or class presentation, or a second RAFT writing assignment.

RUBRIC: STUDENT WORKSHEET

Vocabulary table

- Refer to the lesson glossary for correct definitions.

Reading Passage Reflection

1. Why is the influenza vaccine given every year?

Because the influenza virus changes, the immune system does not always recognize it from year to year. Scientists have not yet been able to create a vaccine that provides long-term protection, so in order to be protected, people need to get immunized each influenza season.

2. What causes an influenza pandemic?

The changes to the influenza virus are usually slight, but sometimes the virus changes dramatically. The result is that most people's immune systems don't recognize it.

3. How many waves did the 1918 pandemic have and how did the waves differ?

The 1918 pandemic had three waves. Most people recovered after becoming ill from the first wave. During wave two, the virus changed to become more deadly causing severe symptoms and death, often within hours. Many healthy, young adults died during the second wave. Wave three was less deadly than wave two, due to another change in the virus and the fact that so many people had already been infected. Even so, wave three was more deadly than wave one.

4. List and describe one or two additional facts that you learned from the reading.

Answers will vary but may include:

- The 1918 pandemic is considered the worst in history.
- It is estimated that one out of three people in the world were infected with influenza during the pandemic.
- It is estimated that between 50-100 million people died during the pandemic.
- Many healthy young adults were killed by the pandemic.
- So many people died that communities could not keep up with proper body disposal.
